

the smart way to measure time & temperature

Timestrip® Complete 2-8°C Cold Chain Monitoring

The Timestrip® Complete is a 2-8°C dual (high and low) threshold temperature breach indicator.

It shows the actual amount of time product has been abused. Timestrip® Complete gives you true 2-8°C temperature monitoring.

Each card contains 1 FCP 2°C indicator as well as Timestrip PLUS 8°C indicator.

You can finally use a low cost chemical indicator with the muscle of an electronic recorder.

Timestrip® PLUS 8°C allows you to see how long your product has been exposed to temperatures above 8°C. The irreversible blue indication moves across the breach window displaying the cumulative time spent above 8°C.

FCP™ quickly provides a clear visual alert when products have been exposed to temperatures that have fallen below 2°C. The irreversible, chemical color change indicator turns from green to red quickly and precisely at a specific set point.

Benefits & Features

- Fast-acting irreversible color change
- Easy decision support, verification
- Quick color transition in less than 1°C temperature range
- Timestrip® PLUS accuracy independently tested at ±1°C

Timestrip® Complete labels are easy to implement, use and maintain:

- Efficient, inexpensive monitoring
- Designed for easy adherence to any product
- Fast, accurate, self-activating visual alerts
- Environmentally safe with no toxic chemicals
- Long-lasting 1-year shelf life.

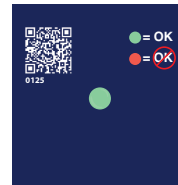

Specification

A full specification is available.

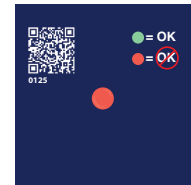

Type	Irreversible, single use
Activation Feature	FCP™ is self-activating; Timestrip® PLUS is manually activated
Indication	FCP™ - Green to red; Timestrip® PLUS - white to blue
Mounting	Pressure sensitive adhesive tape
Size	76mm x 63.5mm

Shipping & Handling

Recommended Storage	Room temperature
Environmental	Non-hazardous, normal disposal (no glass components)
Shelf Life	1 year

unbreached

breached

Our Full Range

Timestrip® also makes time indicators ranging from 5 minutes to 2 years.

Timestrip® PLUS indicators measure elapsed time at a specified temperature. The range spans -20°C to +38°C (-4°F to 100°F).

Four specialist temperature indicators are available: Seafood, Food, Blood Temp 10 (for blood bags), and Duo (for vaccine monitoring).
